

### **Quick Set up Guide for QB4**

- **Ultrasonic frequencies do not penetrate through solid walls or objects. Place unit where you can achieve maximum coverage.**
- **If you need to extend coverage into a separate confined area, an extension speaker can take the output from one of the built-in speakers and transfer it instead to another location.**
- **Recommended initial settings are Alternating Frequency, Medium Warble Rate and Medium Speaker Rotation.**
- **The modification of a bird's behavior takes time. Please allow two to three weeks to achieve results with the recommended settings.**
- **Consider visual scares to enhance results. Products used synergistically tend to produce the best results.**

**For further details, please refer to your Instruction Manual**
